

# Concrete Strength and Temperature Sensors

Conventional Methods

## Wired\*

### Installation

- Select sensor location
- Install sensor at point of measurement and run the thermocouple outside of the concrete for data connection
- Use data logger to manually connect to protruding thermocouples
- Read data on site and/or bring data logger to the office and download data on computer

SmartRock™

## Wireless

- Select sensor location
- Install and secure sensor and thermocouple on rebar
- Connect to sensor wirelessly
- Data is automatically uploaded to cloud and all stakeholders' devices

### Data Extraction

- Take data logger and manually connect to thermocouple protruding from the concrete. These thermocouples can be in unsafe/high-risk areas for workers to connect to and are prone to damage
- Connect data logger to thermocouple and download most recent data point
- Connect data logger to a computer, download the data and calculate strength value
- Send results to appropriate stakeholders

- Locate sensor in the phone application
- Connect to sensor wirelessly and download real-time and all historical data
- Strength, temperature and maturity data is automatically sent to the cloud and to all other stakeholders' devices
- User-friendly PDF and CSV sensor reports can be sent from the mobile device

### Components

- Data logger
- Thermocouples
- Box for thermocouples to connect to Hub (optional)
- Remote monitoring Hub (optional)
- Contractor online data platform (optional)

- Phone application
- Sensor (datalogger and thermocouple)
- Remote monitoring SmartHub™ (optional)
- Contractor online data platform (optional)

### Cost

- Data logger \$\$\$\$
- Thermocouples \$
- Box for thermocouples to connect to Hub \$\$
- Remote monitoring Hub \$\$\$\$
- Contractor online data platform \$\$

- Phone application (FREE)
  - Sensor (data logger and thermocouple) \$\$
  - Remote monitoring SmartHub \$\$\$\$
  - Contractor online data platform\* \$\$
- \* FREE for contractors working with SmartRock™ Plus partners

\* Due to type of wired system, information may vary
